

Decorator Series Glass and Tracks...

Custom
Firescreen Inc.

The

Decorator Series Glass & Track

This glass and track system solves the problem of installing glass doors on zero clearance fireboxes, while allowing the customer to design them. The Decorator Series is a custom built, contemporary set of glass doors available in either standard bi-fold or fireview bi-fold. Our fireview option, with either bronze, smoked, or clear glass makes this door truly a custom product.

Designed with safety and elegance in mind, the glass and track door will not interfere with any louvers or venting of zero clearance units capable of accepting glass doors.

- Clear

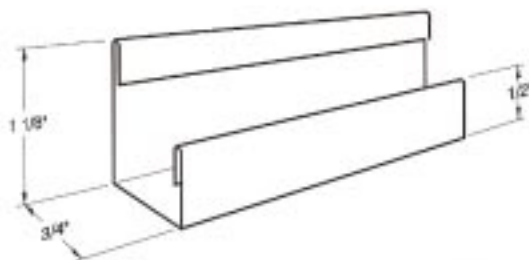

Polished Brass Bi-Fold

Measuring To Fit

Before measuring, closely inspect the firebox and look for anything that will hinder the operation of the glass and track system. Things to look for are: protruding screw heads, existing tracks that may have to be removed, damper handles, shields, or venting.

Proceed by measuring the width of your firebox (A). Then measure the height of the firebox (B). Also, care must be taken when measuring to insure that the firebox will accept the track assembly diagramed below.

Copper Polished Bi-Fold

Satin Brass Bi-Fold

Decorator Trim Kits

Decorator Trim Kits are magnetic strips available in eleven different finishes built to your specified lengths. They can be used on fireplaces, kitchens, bathrooms or other applications of your design.

The trim kits are 1" wide and have magnetic backs which affix to iron or steel content metal surfaces.

The metal finishes which are the same as the Decorator trim pieces enhance the Glass and Track door with coordinating highlights of tasteful accents on the fireplace.

Warranty

One-year limited warranty on broken glass and metal parts for their replacement only. This does not cover damage due to user negligence. Further, Custom Firescreen Company, Inc. assumes no responsibility for improper installation of this product. Any use of this product on fireboxes not designed for use with glass doors is not recommended. Also, during operation it is advised to burn with glass doors in an open position.
